3. **Pressure Control Equipment:** (Schematic Attached)

A 5.0” by 20.0” rotating head on structural pipe from surface to 500’. A 5.0” by 13 3/8” Smith Rotating Head from 500’ to 5,605’ on Conductor. A 5M BOP stack, 5M kill lines and choke manifold, blind & pipe rams, mud cross and 5M annular w/rotating head from 5,605’ to 10,050’.
An 11.0” 10M BOP, 10M kill lines and choke manifold, blind & pipe rams, mud cross and 5M annular w/rotating head from 10,050’ to 13,300’.
The BOPE and related equipment will meet the requirements of the 5M and 10M system.

OPERATORS MINIMUM SPECIFIC FOR BOPE:

The surface casing will be equipped with a flanged casing head of 5M PSI working pressure. We will NU an 11.0” 5M BOP, 5M Annular. This equipment will be nippled up on the surface casing and tested to 250 psi

low test/5M psi high test prior to drilling out. The surface casing will be tested to 1500 psi. Intermediate casing will be tested to the greater of 1500 psi or .22 psi/ft. The choke manifold equipment, upper Kelly cock, floor safety valves will be tested to 5M psi. The annular preventor will be tested to 250 psi low lest and 2500 psi high test or 50% of rated working pressure. A 10M BOP installed with 5M annular with 3 ½" rams, blind rams, mud cross and rotating head from intermediate shoe to TD. The BOPE will be hydraulically operated.

In addition, the BOP equipment will be tested after running intermediate casing, after any repairs to the equipment and at least once every 30 days. Pipe and blind rams will be activated on each trip, annular preventor will be activated weekly and weekly BOP drills will be held with each crew.

Statement on Accumulator System and Location of Hydraulic Controls:

Precision Rig # 426 will be used at the proposed location. Operations will commence after approval of this application. Manual and/or hydraulic controls will be in compliance for 5M and 10M psi systems.

Auxiliary Equipment:

A) Mud logger with gas monitor – 5,605' to TD
B) Choke manifold with one manual and one hydraulic operated choke
C) Full opening floor valve with drill pipe thread
D) Upper and lower Kelly cock
E) Shaker, desander, desilter and mud cleaner.

4. **Proposed Casing & Cementing Program:**

Please refer to the attached Drilling Program.

5. **Drilling Fluids Program:**

Proposed Mud Program:

Interval	Type	Mud Weight
Surface	WBM	8.4 – 8.9
Intermediate	WBM	8.4 – 11.0
Production	WBM	10.0 – 14.0

Anticipated mud weights are based on actual offset well bottom-hole pressure data. Mud weights utilized may be somewhat higher to allow for trip margin and to provide hole stability for running logs and casing.

   Logs:
   Mud Log: From base of surface casing to TD.
   Open Hole Logs: Gamma Ray, Density, Neutron, Resistivity, Sonic, from base of surface casing to TD

7. **Abnormal Conditions:**

   Maximum anticipated bottomhole pressure calculated at 13,300' TD equals approximately 9,310 psi (calculated at 0.70 psi/foot).

   Maximum anticipated surface pressure equals approximately 6,384 (bottomhole pressure minus the pressure of a partially evacuated hole calculated at 0.22 psi/ft).

   Maximum anticipated surface pressure based on frac gradient at 7" casing shoe is 0.8 psi/ft at 10,050' = 5,829 psi

   BOPE and casing design is based on the lesser of the two MASPs which is frac at shoe 5,829 psi

Related Surface Information

1. **Current Surface Use:**
   - Livestock Grazing and Oil and Gas Production.

2. **Proposed Surface Disturbance:**
   - The road will be crown and ditch. Water wings will be constructed on the access road as needed.
   - The topsoil will be windrowed and re-spread in the borrow area.
   - New road to be constructed will be approximately .34 miles in length and 66 feet wide.
   - All equipment and vehicles will be confined to the access road, pad and area specified in the APD.

3. **Location Of Existing Wells:**
   - Existing oil, gas wells within one (1) mile radius of proposed well are provided in EXHIBIT C.

4. **Location And Type Of Drilling Water Supply:**
   - Roosevelt City Municipal Water

5. **Existing/Proposed Facilities For Productive Well:**
   - There are no existing facilities that will be utilized for this well.
   - EXHIBIT D demonstrates the existing pipeline. The corridor will contain one 4 inch gas line and one 2 inch gas line and one 2 inch Salt Water disposal line. Rehabilitation of unneeded, previously disturbed areas will consist of backfilling and contouring the reserve pit area; backsloping and contouring all cut and fill slopes. These areas will be reseeded. Refer to plans for reclamation of surface for details.
   - Upgrade and maintain access roads and drainage control structures (e.g., culverts, drainage dips, ditching, etc.) as necessary to prevent soil erosion and accommodate safe, year-round traffic.

6. **Construction Materials:**
   - Native soil from road and location will be used for construction materials along with gravel and/or scoria road base material. In the event that conditions should necessitate graveling of all or part of the access road and location, surfacing materials will be purchased from commercial suppliers in the marketing area.

7. **Methods For Handling Waste Disposal:**
   - The reserve pit will be designed to prevent the collection of surface runoff and will be constructed with a minimum of ½ the total depth below the original ground surface on the lowest point with the pit. The pit will be lined with a 20-mil polyethylene to prevent leakage of fluids. The liner will be rolled into place and secured at the ends, i.e. buried on top of the pit berms. Prior to use, the reserve pit will be fenced on three sides; the fourth side will be fenced at the time the rig is removed. Drilling fluids, cuttings and produced water will be contained in the reserve pit (trash will be place in the trash cage). Fluids in the reserve pit will be allowed to evaporate prior to pit burial.
   - Garbage and other trash will be contained in the portable trash cage and hauled off the location to an authorized disposal site. Any trash on the pad will be cleaned up prior to the rig moving off location and hauled to an authorized disposal site.
   - Sewage will be handled in Portable Toilets.
   - Produced water will be placed in the reserve pit for a period not to exceed ninety days after initial production. Any hydrocarbons produced during completion work will be contained in test tanks and removed from the location at a later date.
   - Water from the reserve pit may be used for drilling of additional wells. The water will be trucked along access roads as approved in pertinent APD's

8. **Ancillary Facilities:**
   - There will be no ancillary facilities associated with this project.

API number changed 7/27/2010 from 4301350054 to 4304751180. Well in Uintah County not Duchesne.

9. **Surface Reclamation Plans:**

Backfilling of the pits will be done when dry. In the event of a dry hole, the location will be re-contoured, the topsoil will be distributed evenly over the entire location, and the seedbed prepared.

- Seed will be planted after September 15th, and prior to ground frost, or seed will be planted after the frost has left and before May 15th. Slopes to steep for machinery will be hand broadcast and raked with twice the specified amount of seed.

1. The construction program and design are on the attached cut, fill and cross sectional diagrams.
2. Prior to construction, all topsoil will be removed from the entire site and stockpiled. Topsoil for this site is the first 6 inches of soil materials.
3. After the location has been reshaped and after redistributing the topsoil, the operator will rip and scarify the drilling platform and access road on the contour, to a depth of at least 12 inches.

- Rehabilitation will begin upon the completion of the drilling. Complete rehabilitation will depend on weather conditions and the amount of time required to dry the reserve pit.

1. All rehabilitation work including seeding will be completed as soon as weather and the reserve pit conditions are appropriate.
2. Landowner will be contacted for rehabilitation requirements.

10. **Surface Ownership:**

Included is surface use agreement and ROW affidavit of facts.

- Fauna – antelope, deer, coyotes, raptors, small mammals, and domestic grazing animals.
- Current surface uses – Livestock grazing and mineral exploration and production.

Regional/Local Setting & Topography

The proposed location is in Uintah County approximately 3 air miles and 4 road miles north east of Roosevelt, Utah. Montes Creek Reservoir is about 1 mile to the northeast. Access from Roosevelt is by Highway 40 and Uintah County roads to within approximately 0.43 miles of the location where a low standard road will be re-constructed.

The pad for the Young 2-2B1 oil well is proposed near the southwest edge of a flat-topped ridge that breaks off sharply to the west and south into the lower lands of the North Ballard area. At a lower elevation to the east, fields used for agricultural production exist. The pad is laid out in an east to west direction. Only minor excavation will be needed. The access road will enter the location from the east but will be relocated slightly to enter from the north when the reserve pit is closed and the north portion of the location beyond the dead-man anchors reclaimed. Richard Young who attended the presite evaluation and was agreeable to the proposal as presented owns the surface. The site had been previously staked to the north occupying an area that Mr. Young is considering for development. At Mr. Young's request it was relocated. The area appears suitable for constructing a pad, drilling and operating a well.

Geologic Statement of Basis

El Paso proposes to set 500 feet of conductor which will be cemented to surface. The surface hole will be drilled utilizing fresh water mud. The estimated depth to the base of moderately saline ground water is 1,450 feet. A search of Division of Water Rights records indicates that there are over 50 water wells within a 10,000 foot radius of the proposed location. The nearest water well is approximately .5 miles from the proposed site and produces water from a depth of 260 feet. Most of these wells produce water from the Duchesne River Formation and are in the range of 20-700 feet deep. Uses indicated are domestic use, stock watering, irrigation and municipal supply. The "conductor" pipe should be extended to the base of the moderately saline ground water.

Brad Hill	12/1/2009
APD Evaluator	**Date / Time**

Surface Statement of Basis

The proposed location is in Uintah County approximately 3 air miles and 4 road miles north east of Roosevelt, Utah. Montes Creek Reservoir is about 1 mile to the northeast. Access from Roosevelt is by Highway 40 and Uintah County roads to within approximately 0.43 miles of the location where a low standard road will be re-constructed.

The pad for the Young 2-2B1 oil well is proposed near the southwest edge of a flat-topped ridge that breaks off sharply to the west and south into the lower lands of the North Ballard area. At a lower elevation to the east, fields used for agricultural production exist. The pad is laid out in an east to west direction. Only minor excavation will be needed. The access road will enter the location from the east but will be relocated slightly to enter from the north when the reserve pit is closed and the north portion of the location beyond the dead-man anchors reclaimed. Richard Young who attended the presite evaluation and was agreeable to the proposal as presented owns the surface. The site had been previously staked to the north occupying an area that Mr. Young is considering for development. At Mr. Young's request it was relocated. The area appears suitable for constructing a pad, drilling and operating a well.

Re: APD Rescinded – Young 2-2B1, Sec. 2, T.2S, R.1W
Uintah County, Utah API No. 43-047-51180

Ladies and Gentlemen:

The Application for Permit to Drill (APD) for the subject well was approved by the Division of Oil, Gas and Mining (Division) on June 29, 2010. On July 11, 2011 the Division granted a one-year APD extension. No drilling activity at this location has been reported to the division. Therefore, approval to drill the well is hereby rescinded, effective August 31, 2012.

A new APD must be filed with this office for approval prior to the commencement of any future work on the subject location.

If any previously unreported operations have been performed on this well location, it is imperative that you notify the Division immediately.

Sincerely,

Diana Mason
Environmental Scientist
